# On the Subject of Gray Arrows

Or Grey Arrows if you aren't pointing the right way.

On the module are 4 directional buttons, a display screen in the middle and a needy timer on the bottom-left.

If the arrows are not gray, you are looking at a different module.

Begin in the position within the table on this page in which the column is the 3rd character of the serial number and the row is the 6th. Do this every time for the first consecutive correct press.

When the module activates, an arrow will be shown on the display. Follow the arrow from the display. and press the arrow of the space you end up on. If you reach the edge of the table, wrap back to the opposite edge.

Incorrectly pressing an arrow or running out of time will give out a strike and reset the number of consecutive correct presses back to 0.
